## ABOUT ME

As a full-stack engineer with over 10 years of experience, I have mastered the art and science of creating engaging and intelligent digital solutions. From prototyping to UI/UX design, frontend development, backend development, devops, machine learning and artificial intelligence.

I have the necessary skills and knowledge to handle technical challenges. I use agile, scrum, kanban, design thinking and emotional intelligence to manage projects and teams effectively and efficiently, ensuring a smooth and successful software development life cycle.

My dream is to create a more open and connected world, where sovereign people can collaborate, socialize, learn and work using the power and potential of Web3.0. I am always eager to explore new and emerging trends in the distributed space as I am passionate about all things blockchain.

I have a Bachelor of Science Honors degree in Information Technology and am currently studying a Master of Science in Computer Science with Colorado Boulder State University. I am committed to continuous learning and growth as an engineer, mentor and a team leader.
